**Shielded cubicles**  
The room in the room concept outside of the building

## RoomUNITS

### Creating new rooms with HAMACO-cubicles

If the installation of a shielding cabin is not possible within the building due to construction reasons, the self-supporting HAMACO-cubicles of the series RoomUNIT create new facilities outside of the building. With short-term realization times.

The compact cubicle with up to 60 m<sup>2</sup> floor space is delivered with the system-caused basic equipment and an extended equipment by customer wish. Several cubicles form the comfort cubicle RoomUNIT+ with up to 1000 m<sup>2</sup> floor space.

### Pre-fabrication, assembly, construction

The entirely pre-fabricated RoomUNIT is delivered via truck, and set on the destined location by a crane. After that the magnet is placed inside the examination room through a roof opening. In only three days the cubicle including air conditioning, electrical installation, fully equipped interior, and all necessary system components is handed over ready to use for immediate operation.

### Outside design

The outer appearance of the cubicles can be optimally adapted to the total picture of the existing building structure by different roof variants, outer wall structures, and colour design, and thus is integrated into the existing architecture as harmonious component.

### Consulting and planning

We advise you in all questions of planning and realization from the conception over the constructional and technical preparation all the way to ready to use handover. We will take care of everything for you. For example, this includes the creation of foundation plans and the determination of the transfer points for water, waste water, and electrical power.

### Equipment and accessories

The basic equipment includes air conditioning, machine cooling, electrical installation, and the heating unit. The RoomUNIT is handed over fully equipped ready to use. Physician room, waiting areas, changing rooms, and sanitary facilities can be integrated according to your wishes and needs.

## RoomUNITS

### Short description

- Short-term realization
- High reseller value
- Utilization space outside of the building
- from 60 to 1000 m<sup>2</sup> floor space

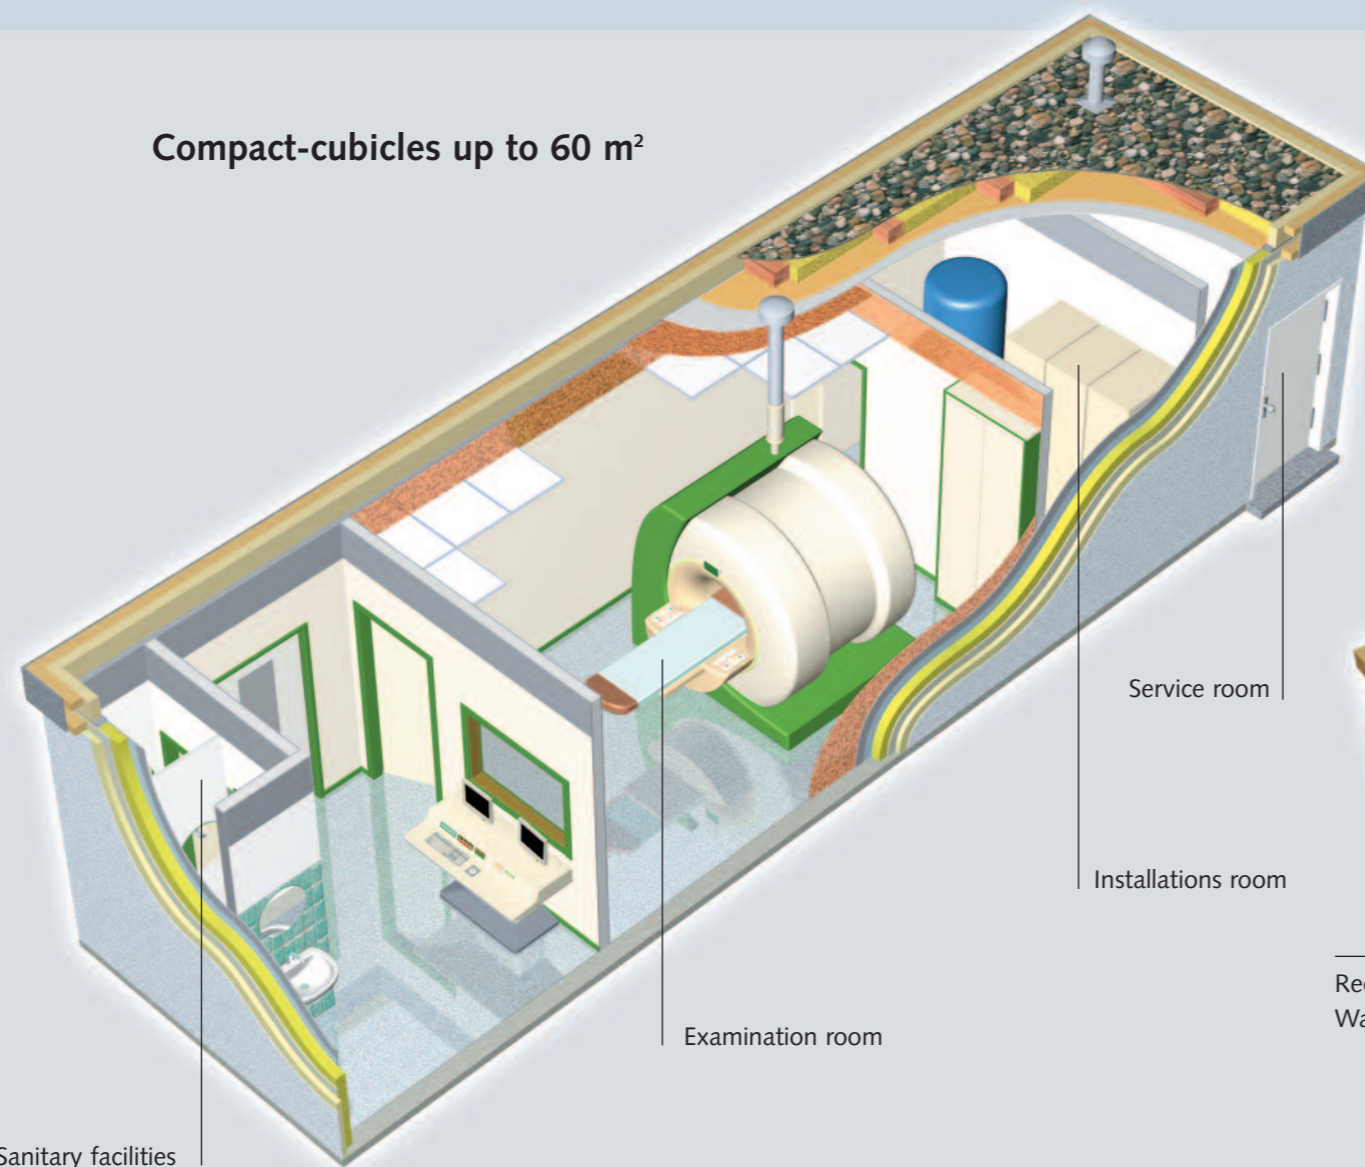

### Technology

- Self-supporting construction
- Weather-resistant
- Full interior
- Installations, examination, and control room
- Including air conditioning
- Including heating unit
- Including technology and electrical installation

### HAMACO-Service

- Individual consulting and planning
- Constructional and technical preparation
- Pre-fabrication ex factory
- Transport
- Set up on location
- only 3 installation days including magnet transfer

Compact-cubicles up to 60 m<sup>2</sup>

Comfort-cubicle up to 1000 m<sup>2</sup>
